SERVICE and ASSEMBLY WORKSHOP in the PR of CHINA

METALLURGICAL PLANTS and ROLLING MILL TECHNOLOGY

SERVICE

CUSTOMER-CENTERED SOLUTIONS

Today, closeness to customers is the crucial factor. Absolutely vital here is fast, flexible order processing, above all in the service and repair business. That's why, from the end of 2005, we will be able to react even better to your wishes in the PR of China with our own service and assembly workshop in Shanghai.

You know how complex the mechanical and hydraulic components for steel and rolling mills are, so it takes a great deal of workshop experience and a high quality standard to ensure plant availability. Responding to growing requirements for more efficiency and plant availability, we have constantly improved our mechanical and hydraulic components.

The only way to minimize the inevitable wear that occurs to certain plant parts is to carry out regular inspections and overhauls as part of a preventive maintenance program. That's where our decades of experience in engineering metallurgical machinery and plants come in, which provide the basis for our extensive repair know-how. Now we make this knowledge available to you in the PR of China. So you profit from expert repairs performed in next to no time.

OUR RANGE OF PRODUCTS AND SERVICES

Launching our own service workshop in the PR of China means we offer you these extra benefits on the spot:

- Extensive consulting and technical support for all repair and maintenance work
- Highly qualified personnel trained in Germany
- Close cooperation and exchange of information
- Implementation of the latest developments and techniques
- Fast access to our full spare parts range

You can choose from a service that includes all types of maintenance, for instance:

- Segment overhauls
- Strand guide roll reworking
- AGC cylinders
- CVC bending blocks
- Drive spindles
- Position transducer repairs
- Coiler mandrel repairs

REPAIRS PERFORMED

- Dismounting
- Inventory and analysis of the degree of wear
- Repair proposals based on the degree of wear analysis
- Repair performance
 - mechanical processing
 - heat treatment
 - surface treatment
 - welding to order
 - assembly
 - functional tests including pressure tests

We perform all repair work according to the exacting standards of our integrated Total Quality Management. Whenever repairs are no longer possible or do not achieve the desired level of effectiveness, you can take advantage of our extensive range of spare parts. Together with you, our specialists always work out the most efficient solution for your purposes.
